

## What's New at Vertex?

**Intuition Touch** is new! What is it? Consider that workshop floors can be hectic environments and, often, paperwork “takes a back-seat.” As a result, this tends to lower expectations for keeping your participant time sheets current.

Or, piece counts may be hurriedly scratched on scraps of paper throughout the day and tallied later. Then, *hopefully*, the next day, the hours and pieces will be recorded onto a timesheet and then later entered into the payroll software or spreadsheet.

Judgment tells you there are many points for potential failure in this chain.

**Intuition Touch**

But what can you do? After all - it is a hectic environment - so people make the best use of the tools they have. Sometimes accuracy suffers. And it takes a long time to handwrite data and keep entering it over and over.

What if you had better tools? What if there was a way to keep track of time and pieces, progress notes, service delivery, and daily and monthly summaries that were easier, quicker and more accurate than paper?

### Introducing... Intuition Touch!

**Intuition Touch** is a web-based system that enables collection of time and documentation anywhere using an *iPad!* And this latest state-of-the-art app also acts as a unit-of-service billing system. Enter data **once** and you're done!

- Eliminate duplicate effort
- Route case notes for approval
- Reduce labor costs
- Increase accuracy
- Increase efficiency
- Improve documentation quality
- Maximize delivery of authorized services
- Increase cash flow
- Reduce paperwork
- Invoice electronically
- Rebill claims at a faster rate
- Rebill fewer claims

**Intuition by Vertex** places the responsibility for accurate time and documentation with front line staff.

Intuition is a modern set of tools to assist service providers in creating only valid service, time, piece counts and documentation records.

It's easy for the DSP's to enter the right data without errors so it will match all requirements for those involved – quality assurance is happy, payroll is happy, funding source requirements will be met, and audit issues will be solved. Plus, redundant effort is eliminated because only one piece of documentation is needed for all your purposes.

**Easy to Use. Easy to Learn. Intuitive.**

Get to know  
**Intuition Service Billing**  
our Medicaid and other payer  
billing solution:

**Intuition Service Billing** is an easy-to-use, HIPAA-compliant billing system for social services agencies looking to be more effective and efficient with EDI claim submissions.

Our billing solution reduces claim rejections, hours spent by automating 75% of the billing process, claim correction time, hours spent determining authorization balance, time spent on re-authorizations, and units not billed because of not having daily authorization balance.

Is your billing and program staff **spending too much time**:

- Collecting service hours, verifying them, data-entering them, and checking for errors?
- Entering that data into multiple spreadsheets and/or systems, only then to get a claim rejection?
- Comparing actual units to find over- or under-utilization of authorized units?
- Fixing errors that caused claims to reject?
- Typing individual claims into the system for payment?
- Determining if clients have expired authorizations?
- Applying for reauthorizations?
- Working on administrative tasks instead of serving clients?

With our state-certified solution for providers, we give your agency relief from these time wasters and free up staff time so they can work on more effective tasks.

If you'd like to reduce by 50% the amount of time staff spend each month to timely submit valid claims and reduce labor expenses by 44% or more, call now to see how **Intuition Service Billing** streamlines your entire billing process.

The latest release of  
**Vertex Financial Manager**  
now available

Vertex Systems has released version 6.03 of Financial Manager which now includes great new features:

- **RoleTailored Client** - helps users focus on their tasks by tailoring their application experience to the needs of their role. It includes new features such as a Role Center page (that displays documents for the number of items that need to be handled such as open orders), Charts, Outlook Parts, and extensive Personalization features (that no longer require a developer.)
- **Jet Reports Express** - included free, Express is a business reporting tool which gives users a simple way to create high impact reports from their Vertex Financial Manager business data from within Excel.
- **SQL Server** - is a database platform for online transaction processing, data warehousing, and e-commerce apps. It's also a business intelligence (BI) platform for data integration, analysis and reporting.

If you need more details, contact our **Professional Services support staff** (800-536-3427).

If you need to replace your outdated accounting system with a solution that fuels productivity, fits your systems, and is familiar to your people, call our **sales team** (866-981-2600).
